Mountain Weather Forecast

Ground Conditions Supplement

Date: Wednesday 22 February 2023. Location: Helvellyn summit at 10:42. Full report: A damp and cloudy start to the day but also a shift to a more northerly airflow which brought colder temperatures and some light sleet and snow above 800m during the morning. At the time of this report (10:42 am) this new snow wasn't settling significantly, although, with a lowering of the freezing level forecast during the day, any further precipitation may settle and down to lower elevations. Aside from this, the majority of the Lakeland fells are snow free with just a few old patches of snow clinging on around corrie rims above 900m. These are not in places where walkers are likely to venture, although there are a few very small (and easy to avoid) patches on the exit slopes of Swirral edge. Some ice was beginning to form on windward surfaces across Helvellyn's summit plateau today and more may be present tomorrow. The windchill (feels-like) temperature was around -10ºC today and is likely to be similar in the coming days.
Anyone heading out onto the higher fells should be prepared with plenty of warm and waterproof clothing including hats and gloves, a map, compass, and headtorch. Carrying crampons/microspikes and an ice axe/walking poles is also recommended for any further snow and ice that develops over the coming days. Temperature: minus 0.5 C, Maximum wind speed 32.4mph, Wind chill: minus 9.2 C, Average wind speed: 9.6mph

Issued at: 02:06 on Thu 23 Feb 2023
